
PCN Number: 06/2019
Title: **SLP Feature for several ace models**
Product Family: ace U / ace L
Release date: 14 August, 2019
Contact: Basler Support
Type of Change:
 Miscellaneous **Firmware** **PC Software**
 Product design **Process**

Reason for Change

To provide our customers the best possible images, we always think about new features that help customers to improve their machines and applications.

The most recent feature of this extension is Basler SLP, which drives down the effort to integrate lightings in a vision system strongly.

Further information about this feature can be found on:

<https://www.baslerweb.com/en/products/vision-components/basler-lighting/>

Change Description

Basler SLP is an easy way to add lighting to a vision system.

This first Basler SLP release enables the Basler SLP controller to be used together with the supported camera models listed below.

The feature enables the direct communication between the Basler SLP Controller and the camera, allowing the lighting to be easily operated in different modes such as continuous, strobe or overdrive.

When using the Basler SLP Controller, the user can also benefit from the compatibility with the Basler SLP feature and gain access to the simple lighting concept via a uniform software interface - Basler pylon Camera Software Suite.

In addition users are given the freedom to choose from a variety of standard light sources or use their own.
