Specifications are subject to change without prior notice

The HS9480 indoor/outdoor housing offers a smooth, sleek look that complements any environment. For quick installation or service, simply remove the two captive screws and slide off the cover to fully expose the camera and lens. This allows access to all camera and lens controls when the camera is in its mounted position. PoE cabling can be routed through watertight fittings in the bottom rear of the housing or can be routed through the mounting base. No heater or fan is needed inside the housing to maintain the camera within the specified temperature range!
